-

RESEARCH

- My professional research focuses on the health status of healthcare workers (with a particular focus on the emergency care sector) and the factors that influence it. By assessing the physical and mental health indicators of people in active patient care, I aim to prevent health problems and provide early and appropriate treatment to improve employees' quality of life and patient care.
- In addition to this, I also examine the specifics of prehospital emergency patient care (e.g., care of paediatric emergency cases; communication in the ambulance; rescue of aggressive patients; assessment of the SBO-triage system and its effectiveness).

Detailed academic work, MTMT identification number: 10022471
